Department of Zoology and Entomology, Rhodes University, Grahamstown 6140, South Africa

Received 11 July 2007 – Accepted 16 October 2007

Commentary – *Apis koschevnikovi* was originally described a century ago independently by both Enderlein and von Buttel-Reepen in 1906. With the two exceptions of Maa (1953) and Goetze (1964), there is no other mention of *A. koschevnikovi* in the apicultural literature until its rediscovery in Borneo some 80 years later (Mathew and Mathew, 1988; Tingek et al., 1988). These reports provided the stimulus for subsequent research and the resulting publications, which constitute 96% of the total 102 for *A. koschevnikovi*. Some 93% of these publications are in the English language and because they have appeared within the last 20 years, they are readily accessible as well. Our knowledge of even the basic biology of this species is very rudimentary and all of the publications on this species are directed to this end.

Apis / koschevnikovi / biogeography / Sundaland / bibliography

Keyword list: Afghanistan; aggressiveness; Asia; bee botany; beekeeping; behaviour; biogeography; biology; Borneo; brood; Brunei; classification; communication; dance language; drones; ecology; evolution; flight; foraging; genetics; honey; India; Indonesia; interspecific interactions; larvae; Malaysia; migration; morphology; mtDNA; natural enemies; nests; Pakistan; pheromones; pollination; populations; queens; reproduction; RNA; Singapore; Sri Lanka; swarming; workers.
